VARIOPRESS

THE VERSATILE REAR LOADER

The name says it all: FAUN's VARIOPRESS offers the highest level of functionality in combination with elegant design. It can be used in any application and is the trend-setting solution for the disposal of all recyclable and waste materials.

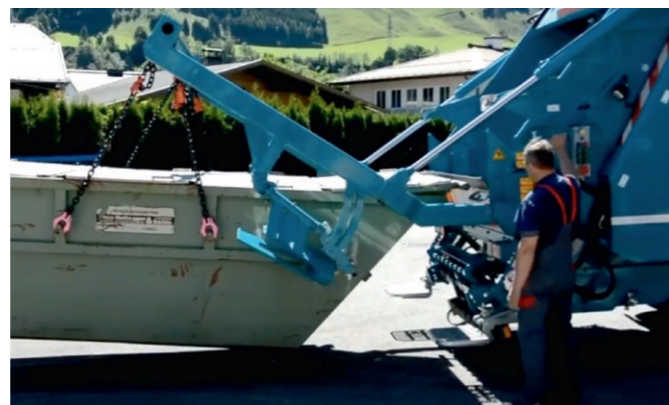

With the appropriate lift system, waste bins from 60 l to 1.1 m³ can be emptied. On request, up to 7 m³ bulk containers can also be picked up with special lifters. Even without or with an integrated lifter, the vehicle is a worthwhile investment in every respect thanks to its low loading edge and the possibility of manual loading.

Quality without compromise

We are constantly improving many tried and tested details and adapting it to the needs of our customers. These ensure that you drive in the best possible way with the VARIOPRESS and FAUN - because we offer maximum quality without compromises.

GOOD REASONS TO BUY VARIOPRESS:

- Organic waste, light fraction, residual waste, paper and light bulky waste
- 60 l up to 7 m³ Container
- 7 - 30 m³ body volume
- 2.00 - 2.50 m chassis width
- up to 4 axles
- All-round seal for the ejection plate as standard
- Volume-optimised body with improved use of space
- Maximum application flexibility for all refuse and recyclable materials

BARLIFT

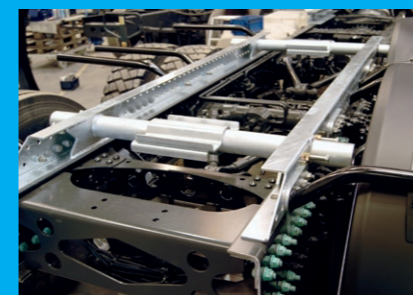

The integrated low-level bar lifter is a one-piece manual lifter for emptying containers and manual loading with low loading edge across the entire width.

Skip-lift

Manual lifter with two separate pick-up units for bins and large container swivel arm. With one-piece comb pick-up and integrated folding arms as well as large container swivel arm with chain suspension for transfer and skip containers.

SKYLIFT X

The interchangeable high-level automatic lifter is easy to maintain and clean, with integrated operating units and generous shoulder space for employees on the footboard.

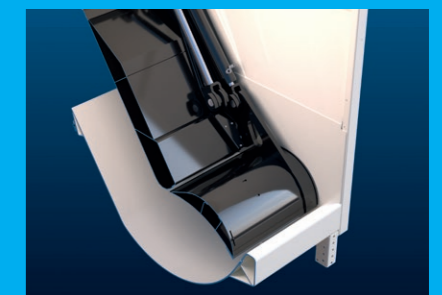

1 Hot-dip galvanised mounting frame

The universal mounting frame enables simple assembly of the body. The galvanised mounting frame is protected against corrosion and can be installed onto any chassis without any specific modifications.

2 Precise production

FAUN focuses on quality. All components are shot-blasted and robot-welded.

Long service life

Particularly high forces are exerted right in the tailgate. Highly wear-resistant steel and robust sheet thicknesses are used here for a longer service life.

3 Clean sliding

A clever idea from FAUN: packings between the rollers of the slide wall prevents any refuse getting into the guide rails. The dreaded waste which slowly constrict the guide rails are prevented. Clean machines keep going longer.

4 Closed tailgate

The internally located cylinder and the closed guide rail, made of highly wear-resistant steel, mean there are no openings in the tailgate which might allow waste to fall out of.

Data highway

All data, evaluations and cameras at a glance in the FAUN FCS 2.0 control unit. Large display, easy colour-controlled menu navigation, dirt resistant, USB interface with charging function, more memory, fast processor.

FAUN.

This name has been moving the world of trucks and vehicles for more than 178 years and makes hearts beat faster all over the world.

We are 2,000 tinkerers, enthusiastic mechanics and people with ideas for technology, craftsmanship and business.

We think outside the box and are not afraid to break new ground.

We are passionate about waste collection trucks and sweepers and we are the first supplier to put hydrogen trucks on the road.

We give everything for a carbon-neutral transport.
